SIMPLEX INTEGRATION

**Regroup**

Using the Regroup Mass Notification platform, your organization can leverage fire panel hardware communication to facilitate and trigger emergency notifications. The Regroup Simplex Fire Panel Integration allows you to streamline emergency notification and eliminate extra steps, by including fire panels as triggers and endpoints within the Regroup platform.

HOW IT WORKS

Regroup's Simplex Integration enables your Simplex Fire Panels to act as single points of activation of all your notification assets. When configured, alarms detected by the fire panels can trigger your Regroup system to alert any groups or contacts in your system. This unique integration keeps people safe and informed while reducing costs by leveraging your existing technologies.

TRIGGERS

- PA Systems & Fire Alarms
- Partner Integrations
- Mobile Applications
- Web UI
- Third Party API's

REGROUP OPTIONS

CAP 1.2 API → HTML Payload / Standard CAP Payload → API Payload delivered to device → Speaker

DID Dial Out → Security PIN or PA Group PIN → PA Group 1 / PA Group 2 / PA Group 3 → Speaker

Newer Simplex Fire Panel Models can trigger or receive real-time alerts from Regroup using direct FEMA standard CAP 1.2 APIs.

Older Simplex Fire Panel Models can be integrated by adding a network card module (SafeLinc) that will allow them to send an e-mail or text to Regroup. Regroup will assign a DID number to a group and treat the inbound e-mail or SMS as a trigger to send notifications.
